DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1-9, 13-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Engel et al. (U.S. Patent # 5,600,527).

Engel et al. discloses claimed invention a combine current and voltage sensor (figure 1) for sensing current and voltage in a first load strap of a circuit breaker (figure 1, item 25A-25C), the combined current and voltage sensor (figure 1, item 7A,7B,7C) comprising: a combined sensor shell (figure 1, item 11); a current sensor located in the combined sensor shell, the current sensor disposed proximate to the first load strap; a first voltage sensor located in the combine sensor shell, the first voltage sensor disposed proximate to the first load strap.

In regards to claims 2-9 and 14-21, Engel et al. also discloses claimed limitation such as "second and third voltage sensors, the configuration plug, a neutral line, an electronic trip unit, a transformer,

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

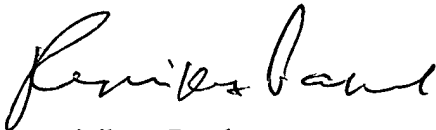

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsko (U.S. Patent # 5,936,817) in combination with Peterson et al. (U.S. Patent # 5,420,799).

Matsko et al. discloses claimed invention (figure 2), including voltage sensors, current sensors, transformer, and neutral . However Matsko does not disclose the utilization of technique for a voltage divider. Peterson et al. teaches the utilization of the similar technique for a voltage divider (figure 14A). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Matsko et al.'s circuit breaker by utilizing the technique taught by Peterson for the purpose of reducing energy consumption.
